

NEW SERIES **XiIIIPlus™**

Outstanding performance that you can rely on and now with even more features and options!

- **New processor, 40% faster than XiIII**
- **New USB port gives faster throughput**
- **Memory increased to 16MB SDRAM**
- **Auto calibration**
- **Front panel speed adjustment**
- **Early warning system for maintenance**

Xi-series printers have been amazing and delighting people all over the world for years with their resilience, reliability and superb quality printing. When the XiIII was introduced in 2000, they were the first printers to offer ZebraLink capability. The new series XiIIIPlus carries on the tradition of offering you the best and most advanced technology to make easy work of even the most demanding bar coding applications.

Even with printers as advanced as XiIII, Zebra has not stood still!

We now bring you the XiIIIPlus, giving

- * **even faster throughput,**
- * **enhanced control features**
- * **more connectivity options**

New for the XiIIIPlus:

Faster throughput

- * **SH3 Processor** is 40% faster than the previous processor.
- * **USB 2.0—Universal Serial Bus port (480Mbits/second)** allows much faster throughput than serial or even parallel connection. (Read about USB 2.0 at www.usb.org)
- * **16MB SDRAM (12MB available for Users)**—ensures that higher throughput can be supported, and enables increased efficiency and productivity.

Enhanced control features

- * **Auto-Calibration**—saves time and avoids wasted labels when setting up new media.
- * **Print Speed adjustment via Front Panel**—easier than before when it had to be done via ZPL. Operator does not need training in ZPL.
- * **Early warning system incorporated** to enable ZebraLink Alerts to be sent when printhead maintenance is due or when the printer is running low on labels, reducing downtime. And when the printhead is cleaned regularly, you lengthen its life as well as assuring that bar codes remain clean and sharp for customer satisfaction.
- * **300 darkness settings for more precise control of print quality.** It means you can get the optimum setting for the labels and ribbons being used, even for unusual combinations of synthetic labels and resin or wax/resin ribbons.

More connectivity options

- * **ZebraNet® Wireless Card Socket** for wireless networking. No cables, no external power supply, easy configuration and ZebraLink compatibility.
- * **USB 2.0**—Plug and play capability avoids the need to reboot the PC when the printer is swapped.

The 'new series' XiIIIPlus printers from Zebra:

- **90XiIIIPlus**
- **96XiIIIPlus**
- **140XiIIIPlus**
- **170XiIIIPlus**
- **220XiIIIPlus**

**For mission-critical applications,
there is no better choice than
Zebra® XiIIIPlus**
